

CRYPTOCURRENCY AND THE FUTURE

Technology, as far as the world is developing can no longer be doubted to be the future of the world as it contributes largely to the development in various sectors of the society. Of course, the finance sector isn't left out as it seems to have gotten one of the biggest shares of the pie technology brought to the table. What else can you think of if not cryptocurrency. In less than a decade, cryptocurrency has obviously proved itself worthy of attention not just to the societal bigwigs but to the common man who sees the future would be 85% digital in terms of finance.

In spite of the influx of investors in the crypto-market, it is important to note that the success therein doesn't come on a platter of gold. one big challenge is the fact that the price of crypto in the market rises and fall as the whales have their way of manipulating the cryptocurrency prices in order to suit their trading goals of gaining largely. However, as it has been pointed above, cryptocurrency has a promising future which is patiently waiting for the few who are informed enough to give it a shot.

Cryptocurrency is no doubts one of the highest job creators in recent times as it tends to accommodate everyone who is willing to empower themselves through the maximization of the digital currency trading. Confidently, every investor despite the high risk of staking in a decentralized system of transaction, the tide is turning: an increasing number of legitimate blockchain companies are launching, more banks and enterprises are experimenting with blockchain and crypto, and legitimate cryptocurrency exchanges have been putting their resources. This is because the idea of having another option which is different from the regular traditional assets, stocks and commodities is something they don't just feel it's worth it but the high returns in the process of trading redefines their financial system.

The features of crypto make it easier than other currencies to use for micropayments, large transfers and sending money overseas, this means that on the long run, cryptocurrency would be making it possible for ease of transaction and the fact that it is globally recognized would even be maximized to acquire fortune. Also, the use of the crypto ATMs is another advantage as it enables the conversion of fiat currencies into cryptocurrencies with the use of mobile cell phone and a QR scan code, here, there would be provided ATM stands which will specially be designed to convert digital currencies to cash. Other advantage the cryptocurrency has is the technological trend which is the "Proof of Work System (POS)" being used for safety measures. Another trend is the use of robotics in San Francisco to carry out a drone delivery system which renders cryptocurrency ATM services.

The benefits of cryptocurrency cannot be under estimated especially the fact that the innovations in technology is making the cryptocurrency now easy to delve into. Once again the future of crypto is promising. There is no denial that the king of Education is “Financial Education”
